

Preserved Moss relies and responds to air humidity. In certain geographic areas during winter and summer seasons, humidity levels may drop below 35%. Moss may become temporarily dry (if HVAC system does not maintain comfortable humidity level).

Be assured, Moss softness will resume once humidity level returns to 35% +.

During dry spells, please be sure to **NEVER WATER MOSS!** Water will damage Moss.

For those who wish to avoid “temporary” dry climate effect on Moss installation, Benetti MOSS Spray **is** a solution.

MOSS Spray is a proprietary *patented*, topical preservation solution available exclusively from Benetti Home s.r.l.

MOSS Spray is a natural, non-toxic preservation solution, applied topically with ease.

Order Moss Spray with your initial Moss order or after if needed.

Request to include MOSS Spray with your order so you have on hand if needed.

MOSS Spray purchase details:

- One liter spray bottle
- 20 square feet of coverage per liter
- One application per dry season
